

吸波材料系列-NFC铁氧体吸波材料 (LT-2000)

Absorbing material series-NFC ferrite absorbing materials

用于RFID的LT-2000系列柔性铁氧体片

LT-2000 Series Flexible Ferrite Plate For 13.56MHz RFID System

随着无线标签及读卡器在手机上的应用，NFC手机支付的大力推广，以及13.56MHz的RFID终端设备的普及，用于狭小空间和高性能改善共振频率波动性的磁性材料必须满足超薄及高 $\mu'Q$ 值的优越性能，而烧结体薄板是真正符合这一需求的产品。

As the wireless RF tags, card reader and NFC mobile payment application on mobile phones, and the 13.56 MHz RFID popularity of terminal equipment, the LT-2000 type of sintered ferrite plate absorbing materials has conform to the demand for narrow space and high performance to improve the resonant frequency and to meet the volatility of ultra-thin and high $\mu'Q$ value.

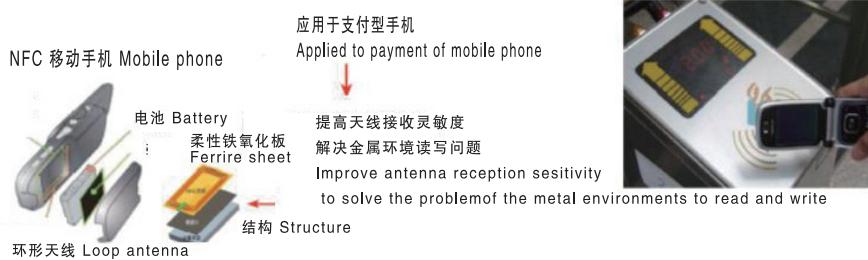

结构 Structure

特性及优势 Features and Benefits

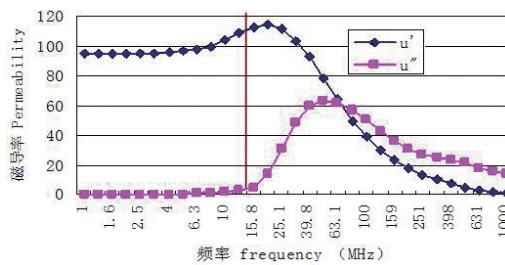

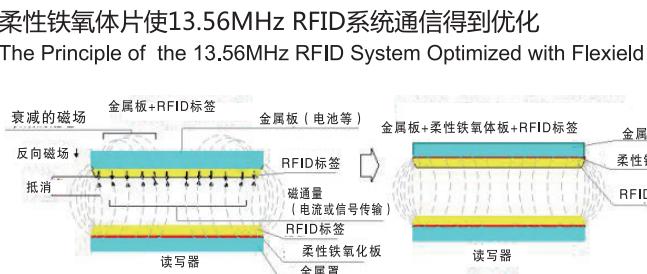

- 具有一定的柔軟性 Flexibled
- 可粘貼，可裁切 Canpaste and cutting
- 超薄燒結高 μ' 值、Q值 Ultra-thin to sintered and high μ' 、 Q value.

(规格) Specification

项目 Items	铁氧体 Ferrite	LT-2000	
工作温度 Operating temperature (°C)	-40~85		
at 13.56MHz	$\mu'_{typ.}$	95	200
	$\mu''_{typ.}$	3	46
厚度 Ferrite Thickness	0.1mm/0.15mm/0.2mm 含胶带与PET膜 Include the adhesive layer and PET film		
应用 Main application	移动手机读写卡；13.56MHz的标签Mobile Phone Reader and Writer；Tag (@13.56MHz)		
尺寸 Dimensions	55x80mm, 50x50mm 可根据客户要求定制Can be custom-made		
满足RoHS 要求 RoHS Compliant Products
